

Project Challenge FOR THE WEEK .

The week's task is all about enhancing the functionality of traffic light signaling systems with your own creative twist!

Begin by revisiting the current traffic light PCB design you worked on.

1. Evaluate the current design:
2. Add creative features:
3. Solve existing issues:

Assessment Criteria:

- Creativity and originality in new features.
- Practicality of your improvements.
- Problem-solving skills in debugging the PCB.
- Aesthetic and professional quality of the final design.

Think outside the box and focus on how your enhancements can make this design stand out.
